RP2 — The PDF files and the literature used in Revision_Deflation

Provenance of PROJECT spacetimes, Revision_Deflation

Prepared for Patrick Lee Nash, Ph.D.

November 12, 2026

1. PDF files of the project folder

The provenance P2 of the main project lists the nine published papers of the project folder, with their checksums, and states which were used for what. **The revision used no PDF file of the project folder anew.** It builds on the documents and programs of the main project, which rest on those papers as P2 describes; the hypotheses of the revision are the author's instructions of November 12, 2026 (provenance RP0), not a passage of a paper.

2. Literature used for the first time in the revision

The following papers were used. They are not in the project folder; their bibliographic data were verified by a search of the web on November 12, 2026, and the numbers taken from them are those stated in the right-hand column.

reference	what was taken from it	used in
F. Hofmann and J. Müller, *Relativistic tests with lunar laser ranging*, Class. Quantum Grav. **35**, 035015 (2018)	the rate of change of Newton's constant, $(7.1 \pm 7.6) \times 10^{-14}$ per year	RS3, Sec. 3
J. Alvey, N. Sabti, M. Escudero and M. Fairbairn, *Improved BBN constraints on the variation of the gravitational constant*, Eur. Phys. J. C **80**, 148 (2020)	Newton's constant at nucleosynthesis over its present value, $0.99^{+0.06}_{-0.05}$ (two sigma)	RS3, Sec. 3
R. Lange et al., *Improved limits for violations of local position invariance from atomic clock comparisons*, Phys. Rev. Lett. **126**, 011102 (2021)	rates of change of the fine-structure constant, $1.0(1.1) \times 10^{-18}$ per year, and of the ratio of the proton mass to the electron mass, $-8(36) \times 10^{-18}$ per year	RS2, Sec. 5; RS3, Sec. 3
R. J. Scherrer and D. N. Spergel, *How constant is the Fermi coupling constant?*, Phys. Rev. D **47**, 4774 (1993)	nucleosynthesis allows the Fermi constant, at fixed fermion masses, to differ by about 10 to 20 per cent from its present value	RS3, Sec. 3
E. W. Kolb, M. J. Perry and T. P. Walker, *Time variation of fundamental constants, primordial nucleosynthesis, and the size of extra dimensions*, Phys. Rev. D **33**, 869 (1986)	cited for the idea; no number taken	RS3, Sec. 1
D. Chirkov, S. Pavluchenko and A. Toporensky, *Exact exponential solutions in Einstein–Gauss–Bonnet flat anisotropic cosmology*, Mod. Phys. Lett. A **29**, 1450093 (2014)	cited for the class of solutions; the solution of DMD, Sec. 1.4a, was computed independently	DMD, Sec. 1.4a

Standard results that are used without a specific source — the Fermi–Dirac and Bose–Einstein spectra of particle creation on an exponentially changing background, the Gibbons–Hawking temperature of de Sitter space, the recurrence relations of the Bessel functions, the weak-coupling ratios of

the theory of Bardeen, Cooper and Schrieffer — are derived or verified numerically in the documents where they appear.
