(a) thermal spectrum, $T = \mathrm{g55}/2\pi$
created quanta per state × $e^{2\pi \text{ ratio}}$

lines: exact laws
symbols: computed
fermions (Fermi-Dirac)
scalar (Bose-Einstein)
ratio $E_\perp$/g55 (fermions), ϖ_b/g55 (scalar)
(b) history of one mode
particles in the mode
10^{0}
10^{-1}
10^{-2}
10^{-3}
10^{-4}
10^{-5}
10^{-6}
$E_\perp$/g55 = 1
$E_\perp$/g55 = 0.5
$k_d = E_\perp$
10^{-2}
10^{0}
10^{2}
physical wavenumber $k_d/E_\perp$ (grows with $x4$)
(c) two deflating directions
created particles per state
10^{-2}
10^{-3}
10^{-4}
10^{-5}
law of g55
g55 = 1; dotted: law of each rate
g66 = 2
g66 = 1.2
g66 = 0.5
