(a) spectra, gsum = 0.0644 H_0
effect of the deflation
difference between the closures
$|\Delta D_\ell^{TT}|$ / cosmic variance
$\ell < 30$
multipole ℓ
(b) the gaps, $k = 0.02$/Mpc
gap / $[(a_{sp}\,\mathrm{gsum}/H_{cf}) \times$ terms$]$
closures M: "Momentum", P: "Pressure"
M: trace
P: momentum
M: shear
P: shear
conformal time τ_{cf} (Mpc)
(c) growth of matter, fixed H_0
growth since $a_{sp} = 0.01$, ratio
lines: growth equations
symbols: full calculation
"Pressure"
"Momentum"
four-dimensional
gsum / H_0
