(a) growth of the modes
growth exponents Re σ / gsum
wavenumber k / gsum
M = 0
M = 0.3
(b) frequency of oscillation
frequency Im σ / gsum
k / gsum
M = 0
M = 0.3
M = 1
(c) the field of a static source
field / [e^τ/(k² + M²)]
τ = gsum x4 since switching on
k² + M² = 1, gsum = 0.2
k² + M² = 0.25, gsum = 0.2
k² + M² = 1, gsum = 1
k² + M² = 4, gsum = 0.5
