(a) temperature: $D_\ell^{TT}/D_\ell^{TT,\,\mathrm{CLASS}} - 1$
(b) cross spectrum: $(D_\ell^{TE} - D_\ell^{TE,\,\mathrm{CLASS}})/\sqrt{D_\ell^{TT} D_\ell^{EE}}$
(c) polarization: $D_\ell^{EE}/D_\ell^{EE,\,\mathrm{CLASS}} - 1$

multipole $\ell$
Rust solver without lensing
Rust solver, lensed with the reference lensing potential
lensed result depends on the continuation of the spectra above $\ell = 2500$
