
(a) mock data against the rate
points: fits
lines: Fisher matrix
Planck-like
with a deep survey
lunar ranging
nucleosynthesis
95 per cent
$\Delta\chi^2$ of the best fit
gsum / H_0
(b) the Hubble constant falls
angle kept, no refit
Planck-like
with a deep survey
best-fit H_0 (km/s/Mpc)
gsum / H_0
(c) what the fit absorbs, gsum = 0.02 H_0
angle kept, nothing refitted
best fit of the six parameters
change of D_ℓ^{TT} (per cent)
multipole ℓ
