(a) growth of the modes
real part of the exponents / gsum
wavenumber k / gsum
$m_{bos} = 0$
$m_{bos} = 0.3$
(b) frequency of oscillation
imaginary part of the exponent / gsum
k / gsum
$m_{bos} = 0$
$m_{bos} = 0.3$
$m_{bos} = 1$
(c) the field of a static source
field / $[e^{\tau_d}/(k^2 + m_{bos}^2)]$
τ_d = gsum $x4$ since switching on
$k^2 + m_{bos}^2 = 1$, gsum $= 0.2$
$k^2 + m_{bos}^2 = 0.25$, gsum $= 0.2$
$k^2 + m_{bos}^2 = 1$, gsum $= 1$
$k^2 + m_{bos}^2 = 4$, gsum $= 0.5$
